DETAILED ACTION

Drawings

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9 recites the limitation "the front surface" in line 2 and "the slide ring" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim 10 recites the limitation "the connection process" in line 1 and "the connecting link" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Goode (5301723).

Claims 1 and 2, the Goode reference discloses an actuating apparatus for a rapid coupling for transferring gaseous and/or liquid fluids (see Figures), comprising a tubular housing (138) and a slide (282, 284) which is mounted in a manner that enables it to be displaced relative to the housing and which is coupled with a lever mechanism (292, 278), wherein the lever mechanism comprises at least one pivoting lever (274) which is laterally mounted on the housing (see Figure 2) in a mirror inverted manner.

Claims 1-3, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Weh et al. (5575510).

Regarding claims 1 and 2, the Weh et al. reference discloses an actuating apparatus for a rapid coupling for transferring gaseous and/or liquid fluids (see Figures), comprising a tubular housing (11) and a slide (18) which is mounted in a manner that enables it to be displaced relative to the housing and which is coupled with a lever

mechanism, wherein the lever mechanism comprises at least one pivoting lever (17, 36) which is laterally mounted on the housing (see Figure 6) in a mirror inverted manner.

Regarding claim 3, wherein the front surface (39) of the pivoting lever(s) (17, 36) pressurizes a slide ring of a rotary transmission lead through on the outlet side.

Regarding claim 9, wherein the front surface (39) comprises an initially flatter incline for force multiplication on the slide ring (see Figure 8).

Regarding claim 10, wherein the connection process is controlled by the pivoting lever (17, 36), as claimed.

Allowable Subject Matter

Claims 4-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of record pertains to various rapid coupling apparatus, similar to the Applicant's device.
